PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience building automated reporting pipelines, advanced Power BI dashboards, and predictive models using SQL and Python. Proven background in data validation, master data management, and translating complex operational datasets into strategic advantages for cross-functional stakeholders.

KEY SKILLS

Querying & Languages: Advanced SQL (CTEs, complex joins), Python (Pandas, NumPy, Scikit-learn for modeling)
Cloud & Data Architecture: AWS (S3, Athena), Snowflake, ETL Pipelines, Star Schema Design, Data Modeling
BI & Enterprise Analytics: Microsoft Power BI, SAP Analytics Cloud, Dashboard Development & KPI Reporting
Data Governance & Quality: Data Profiling, Validation, Quality Checks, Master Data Management concepts

WORK EXPERIENCE

Golden Relief Resources Pvt. Ltd. | Procurement Executive | Pune, India | Jun 2026-Present

- Ingested and aggregated 8 supplier and inventory datasets across 4 operational categories using foundational SQL queries and automated scripts.
- Leveraged Python (Pandas) to perform data profiling on 2500 purchasing logs, identifying early cost-saving opportunities totaling ₹4.5 Lakhs across 20 active vendor accounts.
- Developed an interactive Power BI dashboard tracking 6 core procurement KPIs and vendor performance metrics for initial leadership reviews.
- Standardized and maintained structured Excel pricing trackers, resolving data gaps across 50+ supplier records to streamline vendor evaluations and internal reporting.

Singularium Technologies Pvt. Ltd. | Business Analyst | Remote, India | Oct 2022-Dec 2023

- Automated 4 recurring MIS reporting pipelines using advanced SQL (utilizing CTEs and complex multi-table joins) and Power Query, cutting manual reporting time by ~6 hours weekly.
- Designed and developed 3 interactive Power BI dashboards for operational tracking, applying certified data visualization best practices and DAX measures to give executive stakeholders real-time performance visibility.
- Executed rigorous data validation and cleaning routines using SQL to profile messy operational datasets, ensuring 100% data accuracy and consistency before feeding them into management reports.
- Presented complex data trends, gaps, and process improvement recommendations directly to cross-functional leadership, bridging the gap between technical teams and business needs

KEY PROJECTS

Ecommerce Checkout Dropoff Analysis | PostgreSQL, Power BI, DAX

- Engineered ETL data pipelines and a Star Schema relational data model in PostgreSQL, querying over 42 million e-commerce events and 9.24 million customer sessions to map funnel performance.
- Performed deep data cleaning and profiling to identify unmapped cart-event logic, resolving data inconsistencies and correcting a misleading conversion calculation.
- Built a multi-page Power BI executive dashboard utilizing advanced DAX measures and interactive filters to isolate high-friction customer segments (e.g., 61.29% abandonment among sessions with 11+ product views).

Indian Startup Funding Analysis | Python, Pandas, Power BI, DAX

- Built a programmatic data cleaning and transformation pipeline using Python (Pandas, NumPy) to standardize 5,074 startup funding records and resolve naming and categorical anomalies across datasets.
- Integrated cloud data storage workflows (leveraging Snowflake and AWS S3 architecture concepts) to manage, query, and structure multi-source market records into an analysis-ready repository.
- Developed a comprehensive Power BI and SAP Analytics Cloud comparative dashboard to evaluate regional distribution, sector performance, and mega-deal concentrations.

CarDekho Used Car Price Analysis | Python, Plotly, Scikit-learn, Power BI

- Developed and deployed predictive machine learning models using Python and Scikit-learn (comparing Linear Regression, Random Forest, and Gradient Boosting), with the tuned Gradient Boosting pipeline achieving an R^2 of 0.81.
- Implemented automated data transformations and feature engineering on over 15,000 used car listings to handle missing values, outliers, and depreciation metrics.
- Visualized model performance and market trends using Plotly and AWS QuickSight / Power BI to translate complex technical findings into actionable executive insights.

EDUCATION

University of Limerick | MSc Business Analytics | Sep 2024-Sep 2025
Fergusson College, Pune | BSc Physics (Honours) | Jul 2018-Jul 2021

CERTIFICATIONS, ACHIEVEMENTS & CREDENTIALS

Certifications: Google Data Analytics (Coursera) | Microsoft Power BI Data Analyst | Data Science (Internshala)
Achievements: #1 SimVenture Business Simulation (20+ teams) | #2 Consultant of the Year University of Limerick
Badges: AWS Skill Builder-Data Analytics Learning Plan Completion Badge, Microsoft Learn - Power BI Data Analyst Learning Path, SAP Learning - SAP Analytics Cloud Core Business Intelligence Badge
